Complete Shower Room Installation Guide and Operation Manual

Models 9005
IMPORTANT PLEASE READ BEFORE STARTING ASSEMBLY

ALL STEAM SHOWERS REQUIRE TWO PEOPLE TO ASSEMBLE THEM

IF YOU ARE NOT AT ALL THE DIY TYPE OF PERSON PLEASE

DO NOT ATTEMPT ASSEMBLY

We also VERY STRONGLY recommend that all electrical and plumbing work be carried out by a fully qualified professional or professionals. In some cases this is a legal requirement please checks laws governing bathroom electrical installation. Before employing a plumber MAKE CERTAIN he is conversant with steam showers first! Many are great plumbers but like all of us have some failings, in this case it may be DIY skills. Please let your plumber fully read these instructions prior to him taking on the installation.

VERY IMPORTANT

Steam shower design dictates using both the fixings provided and SILICON between EVERY JOINT, EVERY PLACE A PANEL TOUCHES THE SHOWER TRAY ALONG RUBBERS OR PLASTIC STRIPS AS THEY ARE ASSEMBLED and all other parts such as side panels, roof panels, column etc. This MUST be applied at the time of fitting not afterwards as this will not guarantee a perfect seal and will peel off later. No warranty is implied or given as to leaks.

Sealed correctly as stated you will not have a leak. Incorrectly and result will be a flooded floor!
Dear Customer

Thank you for your recent purchase of our corner shower unit. To ensure safety please carefully read these instructions before installing the shower. These showers are designed to be free standing and movable from their location should you have need to replace anything. ALWAYS USE Flexible braided water inlet pipes at least a metre long (not central heating plastic type!) from house supply to the shower and again flexible waste pipe to join to your house waste. NEVER fix with rigid pipes, never fix the unit to the wall.

NOTE: From time to time these showers may have small differences from that of these instructions. Due to continuous improvements and upgrades, this should not cause you any inconvenience just sometimes extra commonsense needs applying.

3: The pipeline and drainage installation diagram

C = cold water entrance
H = hot water entrance
D = Drainage

4: Installation procedure

1. spirit level on the bath surface, and then an adjustable wrench to adjust corner bolts. To make a horizontal tub.
4. Installation procedure

2. the (3.2) and (3.3) and (3.1) with ST4 * 18mm Self-tapping screws with a Phillips screwdriver.

Place the u-style glass grip around the outside edge of the glass and push into the upright frames.
4. Attach u-style belt to outer edge of glass frame

5. Connect the side panels to the front panels using upright columns (3.4) to make the connection
Using ST4*8mm self tapping screws, fasten the corner columns into position. We recommend using a pilot drill first to ensure accuracy.

Place the glass doors into the frame and attach the door wheels. You can fully adjust the doors into position once you have finished the build.
Take ST4 * 12mm Self-tapping screws and secure the door stoppers into position on the upper and lower rails. Attach the door handles to the glass doors.

Attach the hand showers, foot massger and shelf to the back wall.
10. Using the ST4*18mm self-tapping screws attach the back panels together. It would be best to use a piliot drill to mark out the holes first! Next take M4 *20mm bolts and with an adjustable spanner connect the corner columns to the back panels.

11. Place the roof on the cabin and attach into position using ST4*12mm self tapping screws. Next screw the back panels to the base of the shower tray.
Connecting the pipework

Column 1: This has the hot & cold inlet, steam generator water connection, top shower, hand shower and is pre connected to the body massage jets. Simply connect the hand shower and top shower to the relevant positions and the hot and cold to your household water.

Please check all other connections as they are only factory fitted and may be loose.

Column 2: Simply connect the foot massager and the hand shower. The foot massager can be located at the bottom middle of the centre back panel and is represented by a white box.

12. Connect up the electrics. Each wire is labeled to the corresponding label with male and female connectors. To connect the plumbing please see next page.
YOUR MOMENT OF TRUTH!

LEAVING SHOWER 24 HOURS HAVE YOU BUILT THIS CORRECTLY? FIND OUT NOW.

With all connections tight, hoses checked, jets fully sealed, your shower still around 18 inches from its designated corner and the silicone sealer fully cured (hence leaving for 24 hours at min) Switch on the overhead shower NOT massage jets remember these will fire water out at you and are not suitable for checking leaks as they would normally only operate when a person is fully in front of them. Just use COLD water setting as hot will make cabin misty and condensate thus the inspection becomes very difficult. Now on the OUTSIDE inspect each joint, hose, clip, jet, from one side going round to the back and then other side finishing at the front. If you have a small leak (normally caused through insufficient sealer or air bubble on assemble. Dry area thoroughly and reseal on the OUTSIDE. Again remember where you see water may not be exactly where the leak is, it could have run round to a low point. Never seal anything inside unless you feel it necessary and make sure it is thin and neat, remember you will see this for the life of your shower! Leave to cure again and check. If all good now check shower functions, Jets for back massage, foot massage, (if you have one) and finally hand shower, check your joints to these functions at the rear again. All good now push your shower FROM THE BASE NEVER GLASS OR FRAME into its final resting position. Now you can shower in the knowledge that you have no leaks a job done well a long product life.

Happy showering.

Message to tradesmen: Should you require any help or advice please call 0844 800 3069 10.00am –4.00pm. We further point out that providing this product has been built correctly and the instructions followed with particular attention to the final paragraph, the client should have been left with a 100% trouble free product. We have on occasion heard of less scrupulous tradesmen making return visits at the customers request because of various faults and charging effectively for corrections to work that should never had been required. We would expect no further charges should be made for call backs unless alien to original work carried out.
5 Electric appliance instruction

The power outlet using for this steam generator must have a earthed cable and an electric shock protection, and make sure there is availability. The personnel who install this steam generator must be qualified professional.

AC Supply Voltage: 220V—240V

Water Supply: 0.1-0.4Mpa.
The AC supply using for steam house must be separateness, the cross-section of the power cable must exceed 2.5mm, and with a separate power switch.

Must turn off the power supply after finish using the steam generator
Must cut off the water supply after finish using the steam generator

1. Please open the water supply valve before you push ‘POWER’ key to turn on the power. After you push ‘POWER’ key, the VFD screen will be light, and the steam generator is ready for working, the window of temperature display the currently temperature.

2. Temperature/Time setting: Push ‘TEMPERATURE/TIME’ key on the panel once, the temperature icon will flash, and the predesite temperature is display. You can push ‘UP’ key or ‘DOWN’ key to setting the predesite temperature. The predesite temperature limit to 20–60°C.

Push the ‘UP’ key or ‘DOWN’ key after 3 seconds, the temperature continuously up or down. After set the temperature your need, the user-defined temperature be stored in computer REM automatically and the temperature window display the current temperature of bathroom. The steam generator will stop working when the temperature of bathroom is higher than or equal to the user-defined temperature for 30 seconds later, the steam generator will work again. The default temperature is 45°C.

Push ‘TEMPERATURE/TIME’ key on the panel second, the time icon will display, and the predesite time is display. You can push ‘UP’ key or ‘DOWN’ key to setting the predesite time, the time step two minute for every push, the time limit to: 0–60 min. When the time is equal to ‘00’, the steam generator stop working, if you need steam work continue, you must reset time again and push ‘STEAM’ key. As if you need steam generator working without time limit, set time to ‘00’ directly. On operating, you can reset time at anytime.

**WATER SUPPLY INSTALL:**

![Steam Generator Diagram]

6: Notes

1. It is unadvisable to take a shower after drunk.
2. It is unadvisable to have a shower immediately after acute sports.
3. Please avoid bath or shower in morning.
4. Keep the temperature of dressing room near to the bathroom’s
5. If you feel discomfortable while having a shower, you should go out of the shower room as soon as possible.
6. The time of shower is advisable to be between 15 minutes and 20 minutes, no longer.
7. Drink water to supplement moisture after shower or bathing.
8. People who suffer from heart disease, high blood pressure, diabetes or who feel unwell or pregnant woman are unadvisable to have bathing, massage or shower.

7: Delivery and storage notice

1. It is prohibited to store organic solvent together, such as formic acid and methanol.
2. Handle with care if it need transport. Heavy stress, mechanical impact and sharp pounding is prohibited.
3. It should keep it dry and airy and make sure there is no etchant gas.
Tips, help and advice.

PLUMB YOUR SHOWER AS A DISHWASHER OR WASHING MACHINE, TAPS TO TURN OFF WATER SUPPLY

What am I covered for?
We cover you for all parts for a period of 6-12-24 months according to the level of warranty supplied. This is parts only. Any part that fails we will replace from stock. If not in stock, by order, this however does involve a waiting period. Good news is should you require something, 95% of parts are stock items.

How do I get parts?
Because we operate across Europe you will need to contact our claims department via E-mail only as they are based in France. Please go to www.bath-depot.co.uk, click customer services and the claim form will be in front of you. Please DO NOT call our UK warehouse as they cannot help you.

What if anything electrical goes wrong?
The electrical system of these steam showers is simple, just three key parts, Steam Generator, transformer box and supply and the control panel inside the shower. Supply your copy of the electrical installation invoice you were given when electrics were installed (cannot help you without this so keep it safe!) tell us what part you need on the claim form and it will be sent by post to you.

What if I have a plumbing fault?
Locate the problem, fill out the claim form attach a picture of the part you need and we will send it. Again steam showers are simple in design. Any problem you have should be readily identified. Again a copy of your plumbers invoice will be required.

My plumber cannot get my shower to work!
We have already stated a plumber should be engaged if you had any doubt at all about the shower build. If you built this shower yourself then we expect you to have the same working knowledge as they would. So on this basis and our employees are not allowed to enter into diagnostics, it should be quite simple.

No water pressure.
Have you got water going to the shower? No- you have a house fault... Yes then----
Does your pump come on if fitted to your water supply? No your pump is at fault ---- Yes then---
Got just hot or cold water but not both supplying the shower? Replace thermostatic valve if you have one fitted by filling in claim form. If still no water go back to previous steps

Steam problem
Steam just spits out of steam outlet or scolding water comes out instead. STOP.. Your steam generator unit is fitted incorrectly. Please go back to instructions to ascertain the correct position!

My rear column has started to warp.
Make sure the outlet of the steam is open, failure to do this will result in damaging the column which is not covered under warranty.
**My thermostat is not mixing the water correctly**

This could be either an in-balance of the water or the thermostat needs resetting. First check the thermostat is set up correctly. This will only take around 5 minutes and for information on how to check it visit [www.bath-depot.co.uk](http://www.bath-depot.co.uk) and click on customer services tab. You will see the link “resetting your thermostat valve” click here and this will walk you through the steps. Secondly check you have a “EPV” Equalising Pressure Valve fitted which means you have the same water flow going into the unit. If never help contact us to arrange for a replacement unit.

**My shower cabin leaks water when I shower**

If everything has been sealed and every step followed correctly, it will not leak. If you have this problem it is the fault of the assembler. This problem is **NOT covered by ourselves** and your installer should be contacted.

**My shower leaks from somewhere at the rear of it.**

Pull your steam shower away from wall, check all connections were tightened properly at assembly, check hoses, metal direction control body, thermostatic valve, all joints to items such as hand shower, foot massage etc. It should now become obvious. If it is a part failure just fill in our claim form.

**My shower leaks underneath it.**

Check your house waste to shower connections and all water feed pipes.

**My lights, radio etc doesn’t work.**

Check that the D-Pins are connected correctly at the rear of the cabin. Check that the individual components are connected correctly. If still no power please contact us to arrange for a new control panel to be sent.

**Help I have broken something!**

Simple, contact us! Unlike nearly all suppliers of these steam showers we do carry a vast range of spares and this includes even the glass back walls etc!

We further point out that our staff are not trained or encouraged to help in diagnostics or assembly. Our instructions as laid out were written simply and explicitly in everyday language to enable a person of good DIY skills, a professional or an installer, to easily understand them. If you are stuck there is very little else we can add but we do have a telephone helpline available between 10.00am to 4.00pm Monday to Friday. Please be warned it is expensive at £1.50 per minute but all profits made from this service are passed onto our “Helping the world’s community project” for further details please go to:

[www.discount-bathroom-suites-uk.co.uk/charity_sri_lanka.asp](http://www.discount-bathroom-suites-uk.co.uk/charity_sri_lanka.asp).
